

JAMES MUGO NJOROGÉ

Software Developer | Full-Stack Web & Mobile Developer

Nairobi, Kenya • +254 114 049 760 • jamonjoroge816@gmail.com • github.com/MugoJames

PROFESSIONAL SUMMARY

Software Developer with approximately 1.5 years of practical experience building real-world web and mobile applications across the full stack. Delivers functional, user-focused software spanning frontend interfaces, backend APIs, databases, and mobile applications, including an event booking platform with M-Pesa payment integration via Safaricom's Daraja API. Comfortable working independently across React.js, Node.js, Python/Flask, PHP/Laravel, and Flutter to take projects from design through working implementation. Backed by formal full-stack training, including a Diploma in Software Development and a Software Development certificate.

SOFTWARE DEVELOPER — INDEPENDENT PROJECTS

Approx. 1.5 years of practical software development experience

- Designed, built, and delivered multiple full-stack web and mobile applications independently, taking each project from planning and architecture through to a working, deployed implementation.
- Developed and integrated a mobile payment solution by connecting an event booking platform to Safaricom's M-Pesa via the Daraja API, gaining hands-on experience with real-world third-party API integration.
- Built responsive, user-focused frontend interfaces using React.js and Vue.js, applying component-based architecture and modern JavaScript to deliver clean, usable interfaces.
- Engineered backend systems and REST APIs using Node.js, Python (Flask), and PHP (Laravel), handling client-server communication, data validation, and API design.
- Designed relational database schemas and data relationships to support application functionality across multiple projects.
- Built a cross-platform mobile application using Flutter, applying mobile UI, navigation, and application architecture principles.
- Managed all projects using Git and GitHub for version control, maintaining an organized and collaborative development workflow.
- Applied structured, independent problem-solving throughout the development lifecycle — from requirements and design to debugging and delivery.

SELECTED PROJECTS

Eventra | *Event Booking & Event Management System — Flagship Project*

- Developed Eventra, an event booking and event management platform designed to streamline how users discover, book, and manage events through a digital interface.
- Built core event management functionality, including event listing and booking workflows, to support end-to-end event coordination.
- **Integrated M-Pesa payments using Safaricom's Daraja API**, enabling users to make payments through M-Pesa as part of the event booking workflow — a key technical achievement demonstrating real-world payment API integration.
- Implemented API-based payment communication between the application and the M-Pesa payment platform to support digital transactions within the booking experience.
- Worked across frontend and backend components, connecting the user interface to backend logic and the underlying database to deliver a functional, responsive application.

Technologies: *Full-stack web development technologies, REST APIs, Safaricom Daraja API (M-Pesa)*

Trendware | *Fashion-Focused Web Application*

- Developed Trendware, a fashion-focused software application demonstrating the ability to design and build applications for the fashion and e-commerce space.

- Built a user-focused interface for presenting fashion-related content, applying responsive design principles for usability across devices.
- Implemented application functionality connecting the frontend to backend logic and data, following a structured software architecture.
- Applied full-stack development practices to deliver a cohesive, working web application from design through implementation.

Technologies: *Full-stack web development technologies*

AfriMart | *Cross-Platform Mobile Application — Flutter*

- Developed AfriMart, a cross-platform mobile application built using Flutter, demonstrating practical mobile application development skills.
- Designed and implemented mobile user interfaces and navigation flows to deliver a user-focused mobile experience.
- Applied Flutter's component-based structure to build the application's screens and architecture.
- Handled application data and structured the app for a smooth, cross-platform user experience on mobile devices.

Technologies: *Flutter, Dart*

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, PHP, SQL, Dart (Flutter)

Frontend Development: HTML, CSS, JavaScript, React.js, Vue.js, Responsive Web Design, DOM Manipulation, Asynchronous JavaScript, UI Development

Backend Development: Node.js, Python, Flask, PHP, Laravel, REST API Development, API Design, Client-Server Architecture, JWT Authentication

Databases: Relational Databases, SQL, Flask-SQLAlchemy, Database Design, Data Relationships, Data Manipulation

Mobile Development: Flutter, Cross-Platform Mobile Application Development

Tools & Practices: Git, GitHub, Version Control, Collaboration, Software Engineering Fundamentals, Testing Fundamentals

EDUCATION

Institute of Software Technologies

May 2025 – 2026 (12 months)

Diploma in Software Development – Full Stack

Overall Result: 77% — Grade A

- Strong performance in API Design with Node.js (90%), Database for Developers (85%), JavaScript (85%), React.js (83%), Laravel (83%), and Mobile App Development (88%).

Moringa School

Certificate in Software Development

- Structured training covering JavaScript, React, Python/OOP, and backend development with Flask — including REST APIs, Flask-SQLAlchemy, relational databases, and JWT authentication.
- Completed a full-stack capstone project combining a React frontend with a Flask backend and relational database.
